Description

With their wide range of dimensions and extremely large load-carrying capacity (up to 37,000 kg/vertical structure) as well as stability the palette systems are perfect for storing palletted and heavy piece goods. They are intended for medium high and high rack storages (HRS) of expanded capacities, where goods are stored using forklifts or racklifts.

- Wide range of dimensions
- Different systems: palette, shelving, pumping (gravity), drive-in, movable
- Large load-carrying capacity and stability
- Special design of horizontal beams that balance the compressive and tensile forces
- Gradually hot zinc plated elements according to the **Galvamag** and **Sendzimir** procedure
- A wide variety of functional accessories that meet all needs and requirements
- Clamping step is 50 mm
