Description

The vehicle's axle and barb system is supplied from worlds eminent trademarks that product e-test document. The high strength base brame that is specially designed on axle by qualified steel is produced by our company. Through the agency of this excellent combination, our car can reach 80 km/h velocity with 3000 kg weight according to conditions of land and the path it is pulled. Through the agency of 1500 kg special jack and with mechanic handbrake, the vehicle waits for duty at park position in a safe. If it comes away from puller because of any reason during the journey, safety transportation is ensured by automatic braking system.
