Description

By using these systems, the storage capacities increase to the maximum, without changing the existing dimensions of the storage rooms.

- It includes guide and transportation rails, base structures with drive engines and control equipment
- The control equipment includes the main control box with switches, electrical connections, all the necessary electronic and mechanical protection
- Control program is **Simantik Mikro/DOS** (Windows) by the manufacturer **Siemens**
- Useful for all types of warehousing (palettes, shelves, cantilevers)
- The system adapts to each user individually in the sense of dimensions as well as in the sense of load-carrying capacities
- With regard to the storage capacities the total investment costs with such systems are lower
- By using this system the user benefits from lower operating costs for warehousing, such as heating, cooling, illumination, shorter transportation routes, etc.
- The system **Mobipal** can be installed in new as well as existing storage capacities
